

Bespoke Tree Grilles

TECHNICAL DATA

Tree grilles have an important role to play in maintaining healthy tree pit conditions. Engineered using mild steel or stainless steel to offer the highest level of tree protection, these robust tree grilles are able to withstand heavy footfall whilst preventing access to the roots and trunk.

Available in a wide range of shapes and sizes to suit your specifications, each tree grille is built to complement the surrounding landscape.

The grilles pictured were designed in collaboration with the landscape architects, Planit-IE. As part of the urban regeneration scheme in Altrincham, the goose feet are symbolic of the town's Goose Green square. The feet were laser cut at our in-house factory in Darwen, Lancashire.

Custom logos and shapes can be integrated to match and urban realm regeneration scheme. To enquire about your bespoke tree grille requirements in mild steel, stainless or corten, please contact Graham Wood on +44(0)1254 700213.
